The New DSC Integration Modules
IT-120 & IT-100 for residential, commercial & industrial customers

Las Vegas, Nevada, Wednesday, March 28, 2007 – Tyco Fire & Security, a leading provider of intrusion security products worldwide, is introducing two products that interface with the latest home and building automation products and audio distribution systems to create seamless, fully integrated control solutions for residential, commercial and industrial customers.

DSC is the first security company to offer a Web Services for Devices (WSD) intelligent home network-connected security system plus home entertainment and automation solution. The IT-120 WSD integration module uses WSD to interface with DSC PowerSeries™ control panels and Exceptional Innovation's LifelWare™ solution. The IT-120 is available through the DSC HOME Powered by LifelWare product bundle.

The IT-100 integration module provides an Application Programming Interface (API) to allow third-party home or building automation applications, like Control 4®, Centralite, AMX and HomeLogic to communicate with DSC PowerSeries control panels. It features a bi-directional RS-232 interface that accepts commands and sends event-driven or state-change commands to third-party applications to create shared functionality.

The IT-120 will be available in North America beginning in May. The IT-100 is available in North America now. For more information on these integration modules, visit www.dsc.com.
