## PowerSeries Neo Integrated Cellular and Dual Path Communicators v5.0

### Introduction

PowerSeries Neo is a modular, hybrid system that combines the simplicity of wireless devices and peripherals, with traditional hardwired sensors and expansion modules. This hybrid system is suitable for residential and scalable commercial installations.

The v5.0 communicators provide all the same functionality as the previous V4.1 communicators with expanded functionality available with the PowerSeries Neo V1.2 panels.

### Market Segments

- Residential and commercial
- Available worldwide

### Main Features

Main Feature	Customer Benefits	Value
Increased number of users	Allows for larger installations	Customers can utilize one platform for multiple applications
Supports multi-partner integration with up to 4 integration sessions (TL2803G(R)E only)	Allows interactive, access control and video within one intrusion platform	One intrusion product for larger commercial installations
Virtual keypad support	Remote management of multi-partition systems	Ease of use

### Compatibility

The V5.03G2080(R)E and TL2803G(R)E communicators are compatible with all versions of PowerSeries Neo panels (V1.0 and higher) however the new features are exclusively available when paired with a V1.2 panel.

## Availability

- DSC Brand
- UL, ULC
- PowerSeries Neo Integrated communicators support English, French, Spanish and Portuguese
