Commercial Security System for Large Retail/Office Buildings

Providing security within the commercial retail and office sector comes with some very unique challenges. **But from unique challenges, come unique solutions.**

See how the PowerSeries Pro solution rises to meet the unique needs of large retail and office facilities.

Accountability

- Receive alerts when your business is **Late to Open** or **Early to Close**.
- **Partition Areas.** Turn the system off for the sales area while continuing to protect the stock room or office. Or activate the perimeter alarms while internal alarms are disarmed, allowing employees to move freely within your business.
- **Receive video snapshots** from alarm-triggers to help with event validation in zones where a false dispatch of forces can be very costly.
- **Better monitoring of large areas** including warehouses and storage areas. PowerG ceiling mount long-range PIR detectors provide much more coverage than those mounted on the walls.

Usability

- PowerG wireless technology enables wireless communication up to 1.2 miles line-of-sight. That's **4 times the range** of traditional wireless range. The bus extender has **up to 14 times the coverage** with the capacity to control up to 32 different areas independently.
- **Ease Of Use.** Keypad function keys allow commonly used features or modes to be activated with the press of a button, simplifying complex functions for staff with various technical abilities.
- From partitioning, to flexible arming schedules, to unique keypads for different areas, PowerSeries Pro can manage the complexities of securing **multiple tenants** with different time-of-day needs.

Resource Management

- Powerful and easy-to-use **suite of software** for a winning combination of installation, diagnostic & trouble shooting features. Based on DLS5 Downloading Software, it features WebSA System Administrator Software, with a Routine System Management (RSM) tool for remote diagnostic, inspection and maintenance. That means fewer truck rolls and less personnel time on-site.
- **Be alerted to potential flooding threat** by using the PowerG flood detectors and prevent potential building and inventory losses.
- Best-in-class fire, smoke, and CO **detectors and sensors** offer a wide range of safety and security protection.
- **Long Battery Life.** PowerG wireless devices enable maintenance-free use for up to 8 years which reduces truck rolls.

Deployment Challenges

- No Hammers. No Drills. PowerSeries Pro's wireless technology means a clean and **mess-free installation**.
- **No Disruption.** PowerSeries Pro integrates with wireless PowerG devices, which are easy to set up, allowing you to continue with business as usual during the installation process.
- **No Internet Required** for Installation. With the PowerSeries Pro local installer app you simply plug into the Wi-Fi of your mobile device to aid installation for quick, intuitive programming. Wi-Fi connectivity helps cut the tether to the panel, meaning less time on-site.
- Programmable zone resistance: Simplify takeovers by automatically detecting existing end-of-line resistors all at once. Leave the days of guess-and-check resistor settings and tracing wiring runs behind and spend more time on what matters most. **Less time on-site.**

High Security

- The best-in-class encryption technology in the business. Systemwide **128-bit AES encryption** on wired BUS modules, wired keypads, zone expanders, and power supplies, as well as central monitoring station alarm communications and all PowerG devices, provides your customers top-notch cybersecurity and protection against hackers.
- Complete protection from all kinds of threats. PowerSeries Pro is also compatible with the **best-in-class fire, smoke, and CO detectors**.
- **Prevents tampering** with enhanced triple end-of-line resistors and PowerG anti-masking technology.
- **Anti-masking** for hardwired & wireless zones. PowerSeries Pro protects your system against accidental masking and provides increased security against deliberate intrusion attempts.

Multi-Tenant

- **Partition areas** used by up to 32 different tenants who share the facility with flexible arming schedules and different keypads for each unique partition.
- The system can handle **1,000 users** giving your different tenants the ability to have their own unique codes.
