

# MAXSYS® CONTROL PANEL

## Key Messages for End-users

DSC is renowned for manufacturing products that are easy to use, install and upgrade. As a result, our products are also easy to sell and upsell.

**Targets:** Middle-market retailers, schools, government buildings, industrial complexes, financial institutions and high-end or multi-unit residential.

END-USER BENEFITS	FEATURES
<b>Fully integrated security solution</b>	With MAXSYS, end-users can choose the best combination of technologies to expand security needs as necessary. <ul style="list-style-type: none"><li>• COMBUS expansion</li><li>• Addressable loop expansion</li><li>• Wireless expansion</li></ul>
<b>Easy to use</b>	MAXSYS offers simple one-button activation of five programmable function keys. The push of a single button will ensure a home/business is safe. With the Exit button, there's no need to disarm or rearm the system every time someone leaves the house or lets the dog out. For urgent situations, keypad-activated emergency keys send an alarm signal to the central monitoring station, which in turn, allows the proper authorities to be summoned (police, fire or emergency services).
<b>Rugged reliability</b>	MAXSYS control panels are built with industry-leading lightning and static protection.
<b>Reliable false alarm prevention</b>	MAXSYS control panels are built with numerous false alarm prevention features.
<b>Seamless and intuitive access control capabilities</b>	MAXSYS access control is seamlessly integrated with the burglary system to create an easy-to-use and rational solution that effectively monitors and restricts the individual entry of tens or perhaps a thousand people within a building.
<b>Compatible with award-winning Internet alarm communications technology that can save customers money and reduce false dispatches</b>	Internet alarm communicators (T-Link TL250/TL300) save customers money by taking advantage of their existing Internet/Intranet networks to create fully supervised security solutions between protected premises and the central monitoring station. No other communication network needs to be created. And with industry-leading 128-bit AES encryption, they can be assured that they are getting the most secure Internet alarm communicator available.

## Key Messages for End-users

### END-USER BENEFITS

**Compatible with home automation technologies**

**Simple-to-use and robust downloading software**

### FEATURES

With the installation of data interface modules (PC4401), MAXSYS control panels are able to interface with leading manufacturers of home and building automation products and audio distribution systems to create seamless, fully integrated control solutions.

Telephone interface and automation control modules (ESCORT™ PC4580) are able to control home lighting automatically (able to support 32 X-10 devices). Lights can be programmed to automatically turn on and off according to a daily, weekend or monthly schedule. These tasks can be controlled by turning any touch-tone phone into a fully functional keypad that can be used to monitor and control a security system from home or from anywhere in the world.

DLS2002SA System Administrator™ software gives end-users the ability to view and change codes, access cards and schedules, as well as view system status, arm/disarm partitions, and view, sort and print the event buffer.
