LC-103-PIMSK (Form A)

LC-123-PIMSK (Form C)

Dual-Tech Motion Sensor (PIR & Microwave) with Pet Immunity & Anti-Mask

Sensor de movimiento de tecnología doble (sensor PIR y microondas) con inmunidad a mascotas y función de anti-enmascaramiento

Détecteur de mouvement bi-technologie (IRP & hyperfréquence) avec immunité aux animaux domestiques et protection antimasque

Rilevatore di Movimento a Doppia Tecnologia (Infrarosso + Microonda)

con immunità agli animali e antimascheramento
Dualna czujka ruchu (pasywna podczerwien i mikrofala) odporna na obecność zwierząt z „antymaskingiem”

Instalazione dello snodo
Montaż czujki

Note: Pet immunity feature has not been tested by UL.
NOTE: Detector must be restart by temporary remove power before the new settings will take effect.
RANGE CALIBRATION (Fig. 5.1 and 5.4)
The "MW" potentiometer adjusts the detection Range of MW between Minimum and Maximum (factory set to Middle Position).
The "PIR" potentiometer adjusts the detection Range between Minimum and Maximum (factory set to Middle Position).
NOTE: The "MW" and "PIR" potentiometer may need to be adjusted to the Maximum positions in order to achieve maximum area of coverage as indicated in Fig. 3.

WIRE SIZE REQUIREMENTS
Use #22 AWG (0.5 mm) or wires with a larger diameter. Use the following table to determine required wire gauge (diameter) and length of wire between the detector and the control panel.

ENGLISH

The detector provides an analysis of environmental conditions through the entire movement speed frequency spectrum, allowing focus on intruders and eliminating environmental factors of false alarms. The spectrum analysis is embedded in the VLSI based electronics of the detector assuring high reliability and trouble free operation. Unique function-anti-mask-guarantees detector protection from non desirable approach and any kind of masking beginning from the distance 0.8m and closer.

As the LC-103-PIMSK / LC-123-PIMSK is a combined technology (PIR & microwave) an alarm signal relay activation occurs only when signals from both sensors (PIR & MW) are present at the same time. The effective detection range is the range of which the patterns (PIR & MW) are intersected. The GAIN potentiometer adjustment changes the MW signal intensity so that the effective pattern will be scaled. This Installation Manual shall be used in conjunction with the Installation Manual of the Control Panel.

TYPICAL INSTALLATION
Select mounting location
Choose a location most likely to intercept an intruder. (Our recommendation is a corner installation). See detection pattern (Fig.3). The quad-element high quality sensor detects motion crossing the beam; it is slightly less sensitive detecting motion toward the detector.

Avoid The Following Locations: * Facing direct sunlight. * Facing areas that may change temperature rapidly. * Areas where there are air ducts or substantial airflows. The LC-103-PIMSK / LC-123-PIMSK perform better when provided with a constant and stable environment.

This detector shall be installed and used within an environment that provides the pollution degree max 2 and overvoltages category II, NON HAZARDOUS LOCATIONS, indoor only. The detector is designed to be installed by service persons only.

NOTE: The anti-mask detection output will open for a minimum of 30 seconds and will close only if a signal is received from the PIR after the initial 30 second period.

MOUNTING THE DETECTOR
1. Remove the front cover by unscrewing the holding screw (Fig. 2-11) and gently raise the front cover. (Fig. 2-5)

2. Remove the PC board by unscrewing the holding screw located on the board.(Fig.2 - 9)

3. Break out the desired holes for proper installation (Fig. 1 – 2) for flat mount or Fig. 1-3 for corner mount) Use 4 screws type 3x30mm.

4. The circular and rectangular indentations at the bottom base (Fig. 1-1, Fig. 1-4) are the knockout holes for wire entry.

5. Mount the detector base to the wall or corner.
6. For optional LC-11ST accessory bracket installation open hole Fig. 1-6 for the bracket screw and install Bracket wall adapter (Fig. 2-1&3) or Bracket ceiling adapter (Fig. 2-2&3)

7. Reinstall the PC board by fully tightening the holding screw.
8. Connect wire to terminal block.(Fig. 4)

9. Replace the cover by inserting it back in the appropriate closing pins and screw in the holding screw.

If back tamper is assembled (Fig.1-6) there is no bracket option and the detector must be installed in flat mounting only

DETECTOR INSTALLATION
Terminal Block Connections (See Fig. 4)

Terminals 1 & 2 - Marked "T1, T2" (TAMPER) Connect these terminals to a 24-hour normally closed protective zone in the control unit. If the front cover of the detector is opened, an immediate alarm signal will be sent to the control unit.

Terminals 3 & 4 - Marked "AM: NC, C" This is the alarm output relay of Anti-Mask detection.

Terminal 5 Marked "NC" - This is the NC (Normally Closed) output of ALARM relay. (This contact is functional on LC-103-PIMSK and LC-123-PIMSK)

Terminal 6 Marked "NO" - This is the NO (Normally Open) output of ALARM relay (This contact is functional on LC-123-PIMSK only).

Terminal 8 - Marked " - " (GND) Connect to the negative Voltage output or ground of the control panel.
Terminal 9 - Marked " + " (+12V) Connect to a positive Voltage output of 9.6-16VDC source. Use only a listed power limited source.

NOTE: The detector shall be provided with minimum of 4 hours of standby power from either a listed compatible control unit or power supply.
SETTING - UP THE DETECTOR (Dipswitch Fig.5-2)

LED ENABLE / DISABLE
Switch 1. Used for Setting "LED"
Position Up "ON" - "LED ENABLE" The RED LED will activate when the detector is in alarm condition. (Factory Settings)

Position Down "OFF" - LED DISABLE The LED's are disabled.
NOTE: The state of the switch "LED" - does not affect the operation of the relay. When an intrusion is detected, the alarm relay will switch into alarm condition for 2 sec. In AM alarm condition all 3 LED's blink together regardless of the LED switch position.

ANTI MASK FUNCTION
Switch 2. Used for Setting "AM" - Anti Mask function
Position Up "ON" - "protection against masking the detector from 0.4m and closer. (Factory Settings)

Position Down "OFF" - protection against masking the detector from 0.8m and closer.

PIR SENSITIVITY ADJUSTMENT
Switch 3. Used for Setting "PIR" - provides sensitivity control of PIR according to the environment.
Position Up "ON" - (Pulse=1) - High sensitivity for stable environments. (Factory Setting)

Position Down "OFF" Position - (Pulse=Auto) - Low sensitivity for harsh environments. For ULC Installations use this position

PET IMMUNITY SETTING
Switch 4. Used for Settings "PET" 15kg-25kg(33lbs-55lbs)
Position Up "ON" - Immunity to an animal up to 15 kg (33lbs)
Position Down "OFF" - Immunity to an animal up to 25 kg (55lbs) (Factory Settings)

Note: Pet immunity feature has not been tested by UL.
NOTE: Detector must be restart by temporary remove power before the new settings will take effect.

RANGE CALIBRATION (Fig. 5.1 and 5.4)
The "MW" potentiometer adjusts the detection Range of MW between Minimum and Maximum (factory set to Middle Position).
The "PIR" potentiometer adjusts the detection Range between Minimum and Maximum (factory set to Middle Position).

NOTE: The "MW" and "PIR" potentiometer may need to be adjusted to the Maximum positions in order to achieve maximum area of coverage as indicated in Fig. 3.

ESPAÑOL

Este detector proporciona un análisis de las condiciones ambientales a lo largo del espectro completo de velocidades de movimiento, lo que le permite centrarse en intrusos y eliminar los factores ambientales típicos de las falsas alarmas. El análisis del espectro está integrado en la electrónica del detector basada en la tecnología VLSI, lo que asegura una alta fiabilidad y un funcionamiento sin fallos. La función especial de anti-enmascaramiento garantiza al detector la protección frente a una aproximación no deseada y cualquier tipo de enmascaramiento que comience a una distancia de 0,8 m o más cercana.

Dado que el LC-103PIMSK / LC-123-PIMSK está construido sobre una tecnología combinada (sensor pasivo infrarrojo y microondas), la activación del relé de la señal de alarma se da sólo cuando se reciben señales de ambos sensores (PIR y microondas) al mismo tiempo. El alcance eficaz de detección es el alcance de la intersección de ambos patrones (PIR y microondas). El ajuste de la ganancia (GAIN) del potenciómetro modifica la intensidad de la señal de microondas para escalar el patrón efectivo. Este Manual de instalación deberá utilizarse conjuntamente con el Manual de instalación del panel de control de la alarma.

TYPICAL INSTALLATION
Select mounting location
Choose a location most likely to intercept an intruder. (Our recommendation is a corner installation). See detection pattern (Fig.3). The quad-element high quality sensor detects motion crossing the beam; it is slightly less sensitive detecting motion toward the detector.

Avoid The Following Locations: * Facing direct sunlight. * Facing areas that may change temperature rapidly. * Areas where there are air ducts or substantial airflows. The LC-103-PIMSK / LC-123-PIMSK perform better when provided with a constant and stable environment.

This detector shall be installed and used within an environment that provides the pollution degree max 2 and overvoltages category II, NON HAZARDOUS LOCATIONS, indoor only. The detector is designed to be installed by service persons only.

NOTE: The anti-mask detection output will open for a minimum of 30 seconds and will close only if a signal is received from the PIR after the initial 30 second period.

MOUNTING THE DETECTOR
1. Remove the front cover by unscrewing the holding screw (Fig. 2-11) and gently raise the front cover. (Fig. 2-5)

2. Remove the PC board by unscrewing the holding screw located on the board.(Fig.2 - 9)

3. Break out the desired holes for proper installation (Fig. 1 – 2) for flat mount or Fig. 1-3 for corner mount) Use 4 screws type 3x30mm.

4. The circular and rectangular indentations at the bottom base (Fig. 1-1, Fig. 1-4) are the knockout holes for wire entry.

5. Mount the detector base to the wall or corner.
6. For optional LC-11ST accessory bracket installation open hole Fig. 1-6 for the bracket screw and install Bracket wall adapter (Fig. 2-1&3) or Bracket ceiling adapter (Fig. 2-2&3)

7. Reinstall the PC board by fully tightening the holding screw.
8. Connect wire to terminal block.(Fig. 4)

9. Replace the cover by inserting it back in the appropriate closing pins and screw in the holding screw.

If back tamper is assembled (Fig.1-6) there is no bracket option and the detector must be installed in flat mounting only

DETECTOR INSTALLATION
Terminal Block Connections (See Fig. 4)

Terminals 1 & 2 - Marked "T1, T2" (TAMPER) Connect these terminals to a 24-hour normally closed protective zone in the control unit. If the front cover of the detector is opened, an immediate alarm signal will be sent to the control unit.

Terminals 3 & 4 - Marked "AM: NC, C" This is the alarm output relay of Anti-Mask detection.

Terminal 5 Marked "NC" - This is the NC (Normally Closed) output of ALARM relay. (This contact is functional on LC-103-PIMSK and LC-123-PIMSK)

Terminal 6 Marked "NO" - This is the NO (Normally Open) output of ALARM relay (This contact is functional on LC-123-PIMSK only).

Terminal 8 - Marked " - " (GND) Connect to the negative Voltage output or ground of the control panel.
Terminal 9 - Marked " + " (+12V) Connect to a positive Voltage output of 9.6-16VDC source. Use only a listed power limited source.

NOTE: The detector shall be provided with minimum of 4 hours of standby power from either a listed compatible control unit or power supply.
SETTING - UP THE DETECTOR (Dipswitch Fig.5-2)

LED ENABLE / DISABLE
Switch 1. Used for Setting "LED"
Position Up "ON" - "LED ENABLE" The RED LED will activate when the detector is in alarm condition. (Factory Settings)

Position Down "OFF" - LED DISABLE The LED's are disabled.
NOTE: The state of the switch "LED" - does not affect the operation of the relay. When an intrusion is detected, the alarm relay will switch into alarm condition for 2 sec. In AM alarm condition all 3 LED's blink together regardless of the LED switch position.

ANTI MASK FUNCTION
Switch 2. Used for Setting "AM" - Anti Mask function
Position Up "ON" - "protection against masking the detector from 0.4m and closer. (Factory Settings)

Position Down "OFF" - protection against masking the detector from 0.8m and closer.

PIR SENSITIVITY ADJUSTMENT
Switch 3. Used for Setting "PIR" - provides sensitivity control of PIR according to the environment.
Position Up "ON" - (Pulse=1) - High sensitivity for stable environments. (Factory Setting)

Position Down "OFF" Position - (Pulse=Auto) - Low sensitivity for harsh environments. For ULC Installations use this position

PET IMMUNITY SETTING
Switch 4. Used for Settings "PET" 15kg-25kg(33lbs-55lbs)
Position Up "ON" - Immunity to an animal up to 15 kg (33lbs)
Position Down "OFF" - Immunity to an animal up to 25 kg (55lbs) (Factory Settings)

Note: Pet immunity feature has not been tested by UL.
NOTE: Detector must be restart by temporary remove power before the new settings will take effect.

RANGE CALIBRATION (Fig. 5.1 and 5.4)
The "MW" potentiometer adjusts the detection Range of MW between Minimum and Maximum (factory set to Middle Position).
The "PIR" potentiometer adjusts the detection Range between Minimum and Maximum (factory set to Middle Position).

NOTE: The "MW" and "PIR" potentiometer may need to be adjusted to the Maximum positions in order to achieve maximum area of coverage as indicated in Fig. 3.

FRANCAIS

Le détecteur permet d'analyser les conditions environnementales par l'étalement du spectre de fréquence de mouvement, permettant de se concentrer sur les intrus et d'éliminer les facteurs environnementaux responsables des fausses alarmes. L'analyse du spectre est embarquée dans les composants VLSI du détecteur garantissant une haute fiabilité et un fonctionnement sans encombre. La fonction unique anti-masquage garantit la protection du détecteur contre tout masquage indésiré à une distance de 0,8 m ou moins.

Etant donné que le LC-103PIMSK / LC-123-PIMSK s'appuie sur une technologie combinée (Infrarouge passif et hyperfréquence), l'activation du relais du signal d'alarme survient uniquement lorsque les signaux des deux détecteurs (IRP et hyperfréquence) sont présents en même temps. La portée de détection effective est la portée de croisement des deux technologies (IRP et hyperfréquence). Le réglage du potentiomètre GAIN permet de modifier l'intensité du signal hyperfréquence afin que la portée effective puisse être échelonnée. Ce manuel d'installation doit être utilisé en conjonction avec le manuel d'installation du central de contrôle d'ALARME.

TYPICAL INSTALLATION
Select mounting location
Choose a location most likely to intercept an intruder. (Our recommendation is a corner installation). See detection pattern (Fig.3). The quad-element high quality sensor detects motion crossing the beam; it is slightly less sensitive detecting motion toward the detector.

Avoid The Following Locations: * Facing direct sunlight. * Facing areas that may change temperature rapidly. * Areas where there are air ducts or substantial airflows. The LC-103-PIMSK / LC-123-PIMSK perform better when provided with a constant and stable environment.

This detector shall be installed and used within an environment that provides the pollution degree max 2 and overvoltages category II, NON HAZARDOUS LOCATIONS, indoor only. The detector is designed to be installed by service persons only.

NOTE: The anti-mask detection output will open for a minimum of 30 seconds and will close only if a signal is received from the PIR after the initial 30 second period.

MOUNTING THE DETECTOR
1. Remove the front cover by unscrewing the holding screw (Fig. 2-11) and gently raise the front cover. (Fig. 2-5)

2. Remove the PC board by unscrewing the holding screw located on the board.(Fig.2 - 9)

3. Break out the desired holes for proper installation (Fig. 1 – 2) for flat mount or Fig. 1-3 for corner mount) Use 4 screws type 3x30mm.

4. The circular and rectangular indentations at the bottom base (Fig. 1-1, Fig. 1-4) are the knockout holes for wire entry.

5. Mount the detector base to the wall or corner.
6. For optional LC-11ST accessory bracket installation open hole Fig. 1-6 for the bracket screw and install Bracket wall adapter (Fig. 2-1&3) or Bracket ceiling adapter (Fig. 2-2&3)

7. Reinstall the PC board by fully tightening the holding screw.
8. Connect wire to terminal block.(Fig. 4)

9. Replace the cover by inserting it back in the appropriate closing pins and screw in the holding screw.

If back tamper is assembled (Fig.1-6) there is no bracket option and the detector must be installed in flat mounting only

DETECTOR INSTALLATION
Terminal Block Connections (See Fig. 4)

Terminals 1 & 2 - Marked "T1, T2" (TAMPER) Connect these terminals to a 24-hour normally closed protective zone in the control unit. If the front cover of the detector is opened, an immediate alarm signal will be sent to the control unit.

Terminals 3 & 4 - Marked "AM: NC, C" This is the alarm output relay of Anti-Mask detection.

Terminal 5 Marked "NC" - This is the NC (Normally Closed) output of ALARM relay. (This contact is functional on LC-103-PIMSK and LC-123-PIMSK)

Terminal 6 Marked "NO" - This is the NO (Normally Open) output of ALARM relay (This contact is functional on LC-123-PIMSK only).

Terminal 8 - Marked " - " (GND) Connect to the negative Voltage output or ground of the control panel.
Terminal 9 - Signalé par " + " (+12 V) A relier à une sortie de tension positive de 9.6-16 Vcc.

NOTE: The detector shall be provided with minimum of 4 hours of standby power from either a listed compatible control unit or power supply.
SETTING - UP THE DETECTOR (Dipswitch Fig.5-2)

LED ENABLE / DISABLE
Switch 1. Used for Setting "LED"
Position Up "ON" - "LED ENABLE" The RED LED will activate when the detector is in alarm condition. (Factory Settings)

Position Down "OFF" - LED DISABLE The LED's are disabled.
NOTE: The state of the switch "LED" - does not affect the operation of the relay. When an intrusion is detected, the alarm relay will switch into alarm condition for 2 sec. In AM alarm condition all 3 LED's blink together regardless of the LED switch position.

ANTI MASK FUNCTION
Switch 2. Used for Setting "AM" - Anti Mask function
Position Up "ON" - "protection against masking the detector from 0.4m and closer. (Factory Settings)

Position Down "OFF" - protection against masking the detector from 0.8m and closer.

PIR SENSITIVITY ADJUSTMENT
Switch 3. Used for Setting "PIR" - provides sensitivity control of PIR according to the environment.
Position Up "ON" - (Pulse=1) - High sensitivity for stable environments. (Factory Setting)

Position Down "OFF" Position - (Pulse=Auto) - Low sensitivity for harsh environments. For ULC Installations use this position

PET IMMUNITY SETTING
Switch 4. Used for Settings "PET" 15kg-25kg(33lbs-55lbs)
Position Up "ON" - Immunity to an animal up to 15 kg (33lbs)
Position Down "OFF" - Immunity to an animal up to 25 kg (55lbs) (Factory Settings)

Note: Pet immunity feature has not been tested by UL.
NOTE: Detector must be restart by temporary remove power before the new settings will take effect.

RANGE CALIBRATION (Fig. 5.1 and 5.4)
The "MW" potentiometer adjusts the detection Range of MW between Minimum and Maximum (factory set to Middle Position).
The "PIR" potentiometer adjusts the detection Range between Minimum and Maximum (factory set to Middle Position).

NOTE: The "MW" and "PIR" potentiometer may need to be adjusted to the Maximum positions in order to achieve maximum area of coverage as indicated in Fig. 3.

ITALIANO

Questo rivelatore controlla le condizioni ambientali analizzando lo spettro completo delle frequenze della velocità di moto, concentrando l'attenzione sugli intrusi e eliminando i fattori ambientali che potrebbero causare falsi allarmi. L'analisi dello spettro è implementata nell'elettronica VLSI del rivelatore a garanzia di un funzionamento affidabile e senza inconvenienti. L'esclusiva funzione di antimascheramento protegge il rivelatore contro eventuali interferenze esterne e ogni tipo di mascheramento fino ad una distanza di 0,8 m.

Poiché l'LC-103-PIMSK / LC-123-PIMSK usa una tecnologia combinata (PIR e microonda) l'attivazione del relé di allarme si verifica solo quando entrambi i sensori rilevano contemporaneamente un movimento. L'area di copertura effettiva è data dall'intersezione delle coperture dei due sensori (PIR e microonda). Il potenziometro GAIN modifica l'intensità del segnale MW in modo da poter modificare la copertura effettiva. Queste istruzioni devono essere usate unitamente a quelle relative alla centrale dell'impianto di allarme.

TYPICAL INSTALLATION
Select mounting location
Choose a location most likely to intercept an intruder. (Our recommendation is a corner installation). See detection pattern (Fig.3). The quad-element high quality sensor detects motion crossing the beam; it is slightly less sensitive detecting motion toward the detector.

Avoid The Following Locations: * Facing direct sunlight. * Facing areas that may change temperature rapidly. * Areas where there are air ducts or substantial airflows. The LC-103-PIMSK / LC-123-PIMSK perform better when provided with a constant and stable environment.

This detector shall be installed and used within an environment that provides the pollution degree max 2 and overvoltages category II, NON HAZARDOUS LOCATIONS, indoor only. The detector is designed to be installed by service persons only.

NOTE: The anti-mask detection output will open for a minimum of 30 seconds and will close only if a signal is received from the PIR after the initial 30 second period.

MOUNTING THE DETECTOR
1. Remove the front cover by unscrewing the holding screw (Fig. 2-11) and gently raise the front cover. (Fig. 2-5)

2. Remove the PC board by unscrewing the holding screw located on the board.(Fig.2 - 9)

3. Break out the desired holes for proper installation (Fig. 1 – 2) for flat mount or Fig. 1-3 for corner mount) Use 4 screws type 3x30mm.

4. The circular and rectangular indentations at the bottom base (Fig. 1-1, Fig. 1-4) are the knockout holes for wire entry.

5. Mount the detector base to the wall or corner.
6. For optional LC-11ST accessory bracket installation open hole Fig. 1-6 for the bracket screw and install Bracket wall adapter (Fig. 2-1&3) or Bracket ceiling adapter (Fig. 2-2&3)

7. Reinstall the PC board by fully tightening the holding screw.
8. Connect wire to terminal block.(Fig. 4)

9. Replace the cover by inserting it back in the appropriate closing pins and screw in the holding screw.

If back tamper is assembled (Fig.1-6) there is no bracket option and the detector must be installed in flat mounting only

DETECTOR INSTALLATION
Terminal Block Connections (See Fig. 4)

Terminals 1 & 2 - Marked "T1, T2" (TAMPER) Connect these terminals to a 24-hour normally closed protective zone in the control unit. If the front cover of the detector is opened, an immediate alarm signal will be sent to the control unit.

Terminals 3 & 4 - Marked "AM: NC, C" This is the alarm output relay of Anti-Mask detection.

Terminal 5 Marked "NC" - This is the NC (Normally Closed) output of ALARM relay. (This contact is functional on LC-103-PIMSK and LC-123-PIMSK)

Terminal 6 Marked "NO" - This is the NO (Normally Open) output of ALARM relay (This contact is functional on LC-123-PIMSK only).

Terminal 8 - Marked " - " (GND) Connect to the negative Voltage output or ground of the control panel.
Terminal 9 - Signalé par " + " (+12 V) A relier à une sortie de tension positive de 9.6-16 Vcc.

NOTE: The detector shall be provided with minimum of 4 hours of standby power from either a listed compatible control unit or power supply.
SETTING - UP THE DETECTOR (Dipswitch Fig.5-2)

LED ENABLE / DISABLE
Switch 1. Used for Setting "LED"
Position Up "ON" - "LED ENABLE" The RED LED will activate when the detector is in alarm condition. (Factory Settings)

Position Down "OFF" - LED DISABLE The LED's are disabled.
NOTE: The state of the switch "LED" - does not affect the operation of the relay. When an intrusion is detected, the alarm relay will switch into alarm condition for 2 sec. In AM alarm condition all 3 LED's blink together regardless of the LED switch position.

ANTI MASK FUNCTION
Switch 2. Used for Setting "AM" - Anti Mask function
Position Up "ON" - "protection against masking the detector from 0.4m and closer. (Factory Settings)

Position Down "OFF" - protection against masking the detector from 0.8m and closer.

PIR SENSITIVITY ADJUSTMENT
Switch 3. Used for Setting "PIR" - provides sensitivity control of PIR according to the environment.
Position Up "ON" - (Pulse=1) - High sensitivity for stable environments. (Factory Setting)

Position Down "OFF" Position - (Pulse=Auto) - Low sensitivity for harsh environments. For ULC Installations use this position

PET IMMUNITY SETTING
Switch 4. Used for Settings "PET" 15kg-25kg(33lbs-55lbs)
Position Up "ON" - Immunity to an animal up to 15 kg (33lbs)
Position Down "OFF" - Immunity to an animal up to 25 kg (55lbs) (Factory Settings)

Note: Pet immunity feature has not been tested by UL.
NOTE: Detector must be restart by temporary remove power before the new settings will take effect.

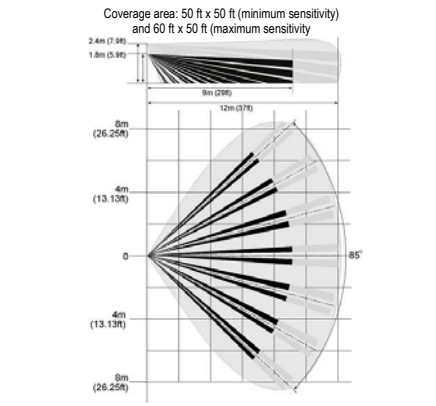

RANGE CALIBRATION (Fig. 5.1 and 5.4)
The "MW" potentiometer adjusts the detection Range of MW between Minimum and Maximum (factory set to Middle Position).
The "PIR" potentiometer adjusts the detection Range between Minimum and Maximum (factory set to Middle Position).

NOTE: The "MW" and "PIR" potentiometer may need to be adjusted to the Maximum positions in order to achieve maximum area of coverage as indicated in Fig. 3.

POLSKI

Czujka LC-103PIMSK zapewnia warunki otoczenia w pełnym spektrum częstotliwości prędkości ruchu pozwalając na wykrywanie intruzów przez równoczesną eliminacji czynników środowiskowych i wynikających z nich fałszywych alarmów. Analiza widmowa realizowana przez elektronikę czujki opartą na układach VLSI gwarantuje wysoką niezawodność i brak zakłóceń w działaniu. Unikalna funkcja - antymaskingu - gwarantuje ochronę czujki przed niepożądanym zbliżaniem się do niej i próbami jej maskowania w odległości 0,8 m i bliżej. Ponieważ czujka LC-103PIMSK / LC-123-PIMSK wykorzystuje łączoną technologię (pasywna podczerwien i detekcja mikrofalowa) uruchomienie przekaźnika sygnału alarmowego następuje dopiero wtedy, gdy obydwa czujniki (pasywne) podczerwien i detekcji mikrofalowej) w tym samym czasie zostaną naruszone. Efektywny zasięg detekcji jest tym zasięgiem, w którym pokrywają się charakterystyki detekcji czujników pasywnych podczerwien i detekcji mikrofalowej. Regulacja dokonywana przy użyciu potencjometru GAIN zmienia intensywność sygnału mikrofalowego, dlatego też efektywna charakterystyka detekcji może być skalowana. Przed przystąpieniem do instalacji czujki należy dokładnie zapoznać się z poniższą instrukcją.

WYBÓR MIEJSCA INSTALACJI
Czujkę należy zainstalować w taki sposób, aby jej zasięg działania objął chronione pomieszczenie (Rys. 3). Wysokiej jakości czteroelementowy czujnik QUAD jest bardziej wrażliwy na ruch przynajmniej wiązkę, niż na ruch skieroany w stronę czujnika.
Waż

For ULC Installations use sensitivity settings between MIN and MID positions and PIR pulse count set to AUTO. (DIP 3 is OFF)

Country Exclusions
 EN50131-1 EN50131-2-4 Grade 2 Class 2
 FCC ID:F53061.C3105 IC ID:160A-06L.C3105

For UL/ULC installations use only detectors operating at 10.525GHz.
 UL/ULC tested operation of the product at 0 - 49°C, 93%RH.
 Use only resistive loads on the relay outputs.

Warning! Changes or modifications to this equipment not expressly approved by the party responsible for compliance (DSC Ltd.) could void the user's authority to operate the equipment. This device complies with part 15 of the FCC rules. Operations are subject to the following two conditions:
 (1) This device may not cause harmful interference and
 (2) This device must accept any interference received, including interference that may cause undesired operation.

This Class B digital apparatus complies with Canadian ICES-003. The term 'IC' before the radio certification number only signifies that Industry Canada technical specifications were met.

Wire Length	m	200	300	400	800
Wire Diameter	mm	.5	.75	1.0	1.5
Wire Length	ft.	656	984	1312	2624
Wire Gauge	AWG	24	21	18	15

WALK TESTING

IMPORTANT NOTE: Upon installation, the unit should be thoroughly tested to verify proper operation. The end user should be instructed on how to perform a walk test weekly.
 Make sure detector has been set up: Pulse=1, LED=ON and protected area cleared of all people. Create motion in the entire area where coverage is desired, observe the Green LED for PIR detection, and Yellow LED for MW detection. Should the coverage be incomplete, readjust Range or relocate the detector.

Once coverage is as required, the alarm LED may be disabled. Use the optional LC-L1ST wall mount / ceiling mount brackets to solve placement problems.

The brackets allow for horizontal positioning of the detector. Note: For UL installations the detector shall be tested annually.

TECHNICAL SPECIFICATION

Detection Method	Quad (Four element) PIR & microwave pulse Doppler
Power Input	9.6 to 16Vdc
Current Draw	Active: 25mA Standby: 20mA
Temp Compensation	Yes
Alarm Period	2 ± 1 sec
Alarm Outputs	LC-103-PIMSK - Form A - NC LC-123-PIMSK - Form C - NC&NO 28Vdc 0.1 A with 10 Ohm series protection resistors
AM Outputs	N.C 28Vdc 0.1 A with 10 Ohm series protection resistors open when cover is removed N.C 28Vdc 0.1 A with 10 Ohm series protection resistors open when cover is removed
Tamper Switch	1min
LED Indicator	LED's are blinking during warm up period and self testing
Red LED	ON during alarm
Green LED	PIR CHANNEL
Yellow LED	MW CHANNEL
RF Immunity	10 V/m plus 80% AM from 80 MHz to 2GHz
Static Immunity	8kV contact, 15kV air
Transient Immunity	2.4kV @ 1.2joules
Operation Temp	-10°C ~ +55°C (14°F ~ 131°F)
Dimensions	118mm x 62.5mm x 41mm (4.65" x 2.46" x 1.61")
Weight	102gr. (3.6oz.)

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures: -- Reorient or relocate the receiving antenna. -- Increase the separation between the equipment and receiver. -- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected. -- Consult the dealer or an experienced radio/TV technician for help.

Limited Warranty

Digital Security Controls warrants that for a period of 12 months from the date of purchase, the product shall be free of defects in materials and workmanship under normal use and that in fulfillment of any breach of such warranty, Digital Security Controls shall, at its option, repair or replace the defective equipment upon return of the equipment to its repair depot. This warranty applies only to defects in parts and workmanship and not to damage incurred in shipping or handling, or damage due to causes beyond the control of Digital Security Controls such as lightning, excessive voltage, mechanical shock, water damage, or damage arising out of abuse, alteration or improper application of the equipment.
 The foregoing warranty shall apply only to the original buyer, and is and shall be in lieu of any and all other warranties, whether expressed or implied and of all other obligations or liabilities on the part of Digital Security Controls. Digital Security Controls neither assumes responsibility for, nor authorizes any other person purporting to act on its behalf to modify or to change this warranty, nor to assume for it any other warranty or liability concerning this product.

In no event shall Digital Security Controls be liable for any direct, indirect or consequential damages, loss of anticipated profits, loss of time or any other losses incurred by the buyer in connection with the purchase, installation or operation or failure of this product. Motion detectors can only detect motion within the designated areas as shown in their respective installation instructions. They cannot discriminate between intruders and intended occupants. Motion detectors do not provide volumetric area protection. They have multiple beams of detection and motion can only be detected in unobstructed areas covered by these beams. They cannot detect motion which occurs behind walls, ceilings, floor, closed doors, glass partitions, glass doors or windows. Any type of tampering whether intentional or unintentional such as masking, painting, or spraying of any material on the lenses, mirrors, windows or any other part of the detection system will impair its proper operation.
 Motion detectors can only detect motion within the designated areas as shown in their respective installation instructions. They cannot discriminate between intruders and intended occupants. Motion detectors do not provide volumetric area protection. They have multiple beams of detection and motion can only be detected in unobstructed areas covered by these beams. They cannot detect motion which occurs behind walls, ceilings, floor, closed doors, glass partitions, glass doors or windows. Any type of tampering whether intentional or unintentional such as masking, painting, or spraying of any material on the lenses, mirrors, windows or any other part of the detection system will impair its proper operation.
 Passive infrared motion detectors operate by sensing changes in temperature. However their effectiveness can be reduced when the ambient temperature rises near or above body temperature or if there are intentional or unintentional sources of heat in or near the detection area. Some of these heat sources could be heaters, radiators, stoves, barbecues, fireplaces, sunlight, steam vents, lighting and so on.
 Warning: Digital Security Controls recommends that the entire system be completely tested on a regular basis. However, despite frequent testing, and due to, but not limited to, criminal tampering or electrical disruption, it is possible for this product to fail to perform as expected.

Important Information: Changes or modifications not expressly approved by Digital Security Controls could void the user's authority to operate this equipment.

posiciones máximas para conseguir la máxima superficie de cobertura, tal y como se indica en la fig. 3.

REQUISITOS DE TAMAÑO DE LOS CABLES

Utilice cables de calibre 22 AWG (0.5 mm) o de mayor diámetro. Utilice la siguiente tabla para determinar el calibre (diámetro) del cable y su longitud entre el detector y el panel de control.

Lunghezza	m	200	300	400	800
Diámetro	mm	.5	.75	1.0	1.5
Lunghezza	ft.	656	984	1312	2624
Sezione	AWG	24	21	18	15

PRUEBA DE DESPLAZAMIENTO

NOTA IMPORTANTE: Tras realizar la instalación, la unidad deberá ser probada exhaustivamente para verificar que funciona correctamente. Deberá instruírse al usuario final en el modo de realizar una prueba semanal de desplazamiento.

Aségúrese de que se ha configurado el detector: Pulse=1, LED=ON, y ninguna persona en la zona protegida. Genere movimiento en la zona completa que se deseé cubrir y observe el LED verde para la detección del sensor PIR y el LED amarillo para la detección por microondas. En el caso de que la cobertura sea incompleta, vuelva a ajustar el alcance o reubique el detector.

Una vez haya conseguido la cobertura que desea, puede desactivar el LED de alarma. Utilice los soportes opcionales LC-L1ST para montaje en pared / techo para resolver los problemas de ubicación. Estos soportes permiten colocar el detector en posición horizontal.

ESPECIFICACIONES TÉCNICAS

Método de detección	Sensor PIR Quad (de cuatro elementos) y pulsos Doppler de microondas
Alimentación	Entre 9.6 y 16 V CC
Consumo de corriente	Activo: 25 mA Reposo: 20 mA
Tcompensación de temperatura	SI
Periodo de alarma	2 ± 1 s
Salidas de la alarma	LC-103-PIMSK Forma A - NC LC-123-PIMSK Forma C - NC&NO 28Vdc 0.1 A con 10 Ohm Resistencia de protección en serie
Salidas de la Anti-enmascaramiento	N.C. 28 VCC, 0.1 A con resistencia protectora en serie de 10 ohm; se activa cuando se retira la tapa
Interruptor de seguridad	N.C. 28 VCC, 0.1 A con resistencia protectora en serie de 10 ohm; se activa cuando se retira la tapa
Periodo de calentamiento	1 min
Indicador LED	Los LED parpadean durante el periodo de calentamiento y la prueba automática
LED rojo	Encendido durante la alarma
LED verde	CANAL DEL SENSOR PIR
LED amarillo	CANAL DE MICROONDAS
Inmunidad a radiofrecuencia	10 V/m más 80% AM de 80 MHz a 2GHz
Inmunidad a electricidad estática	8kV en contacto, 15kV en el aire
Inmunidad transitoria	2.4 kV a 1.2 joule
Temperatura de funcionamiento	-10°C ~ +55°C (14°F ~ 131°F)
Dimensiones	118mm x 62.5mm x 41mm (4.65" x 2.46" x 1.61")
Peso	102gr. (3.6oz.)

Utilice solo cargas resistivas en las salidas de los relés

Garantía limitada

Digital Security Controls garantiza que, durante un periodo de 12 meses a partir de la fecha de compra, este producto estará libre de defectos en materiales y fabricación si es sometido a un uso normal y que, en compensación por cualquier incumplimiento de dicha garantía, Digital Security Controls reparará o sustituirá, de acuerdo con su decisión, el equipo defectuoso tras la devolución del mismo al centro de reparaciones. Esta garantía aplica sólo a defectos en piezas y fabricación, y no a los daños provocados por la entrega o la manipulación, ni a los daños debidos a causas que se encuentran fuera del control de Digital Security Controls, como pueden ser relámpagos, sobretensiones, choques mecánicos, daños provocados por el agua o daños provocados por el uso abusivo, alteración o aplicación inadecuada del equipo.
 La anterior garantía sólo aplicará al comprador original, sustituye y sustituirá a cualquier otra garantía, ya sea expresada o implícita, así como a cualquier otra obligación o responsabilidad correspondientes a Digital Security Controls. Digital Security Controls no assume la responsabilidad de, ni autoriza a ninguna otra persona que pretenda actuar en su representación a, modificar o alterar esta garantía ni a asumir en su nombre ninguna otra garantía o responsabilidad en relación con este producto.
 En ningún caso será responsable Digital Security Controls por cualquier daño directo, indirecto o consecuente, lucro cesante, pérdida de tiempo o cualquier otra pérdida sufrida por el comprador en conexión con la compra, instalación, funcionamiento o avería de este producto.
 Los detectores de movimiento sólo pueden detectar movimiento en las zonas designadas en sus respectivas instrucciones de instalación. Dichos detectores no pueden discriminar entre intrusos y ocupantes. Los detectores de movimiento no proporcionan protección volumétrica de las zonas protegidas. Estos detectores poseen múltiples haces de detección, con lo que sólo puede detectarse el movimiento en zonas cubiertas por dichos haces que no presenten obstáculos. No pueden detectar el movimiento existente detrás de paredes, techos, suelos, puertas cerradas, divisiones acristaladas, puertas acristaladas o ventanas. Cualquier tipo de vandalismo, ya sea intencionado o no intencionado, como cubrir, pintar o rociar cualquier tipo de material sobre las lentes, espejos, ventanas o cualquier otra pieza del sistema de detección, afectará a su correcto funcionamiento.
 Los detectores infrarrojos pasivos de movimiento funcionan a través de la detección de cambios en la temperatura. No obstante, su eficacia puede verse reducida cuando la temperatura ambiente se acerca o supera la temperatura corporal, o si existen fuentes de calor intencionadas o no intencionadas en la zona de detección o cerca de ella. Algunas de estas fuentes de calor pueden ser calefactores, radiadores, estufas, barbacoas, chimeneas, freidoras, luz del sol, rejillas de vapor, luces, etcétera.

Atención: Digital Security Controls recomienda comprobar por completo el sistema con frecuencia. No obstante, a pesar de estas comprobaciones frecuentes y debido entre otras posibles causas a un posible vandalismo o a una interrupción del suministro eléctrico, es posible que este producto no funcione como cabe esperar.
Información importante: Los cambios o modificaciones no aprobados expresamente por Digital Security Controls pueden anular la autorización del usuario a hacer funcionar este equipo.

Longueur du fil	m	200	300	400	800
Diamètre du fil	mm	.5	.75	1.0	1.5
Longueur du fil	ft.	656	984	1312	2624
Calibre du fil	AWG	24	21	18	15

TEST DE FONCTIONNEMENT

REMARQUE IMPORTANTE : Lors de l'installation, l'unité doit être minutieusement testée pour s'assurer de son bon fonctionnement. L'utilisateur final doit savoir comment réaliser un test de fonctionnement hebdomadaire. Assurez-vous que le détecteur a été configuré de la façon suivante : Impulsion=1, Voyant-allumé et zone protégée évacuée. Créez un mouvement dans toute la zone à couvrir, observez le voyant vert pour la détection IRP, et le voyant jaune pour la détection hyperfréquence. Si la couverture est incomplète, ajustez la portée ou déplacez le détecteur. Lorsque la couverture appropriée est atteinte, le voyant d'alarme peut être désactivé.

Utilisez les supports de montage au plafond / mural LC-L1ST en option pour résoudre les problèmes de placement. Les supports permettent de placer le détecteur horizontalement

CARACTERISTIQUES TECHNIQUES

Méthode de détection	Impulsion hyperfréquence à effet Doppler et IRP Quad (quatre éléments)
Alimentation en entrée	9.6 à 16 Vcc
Appel de courant	Actif: 25 mA En En veille: 20 mA
Compensation de temp.	OUI
Durée d'alarme	2 ± 1 sec
Sortie d'alarme	LC-103-PIMSK Format A NC LC-123-PIMSK Format C NC&NO 28Vdc 0.1 A avec 10 Ohm résistances de protection en série
Sortie d'antimasque	N.F 28 Vcc 0.1 A avec une résistance de protection en série de 10 Ohm - s'ouvre lorsque le couvercle est retiré
Interrupteur anti-sabotage	N.F 28 Vcc 0.1 A avec une résistance de protection en série de 10 Ohm - s'ouvre lorsque le couvercle est retiré
Durée de préchauffage	1 min
Voyant rouge	Allumé pendant une alarme
Voyant vert	CANAL IRP
Voyant jaune	CANAL HYPERFREQUENCE
Immunité contre les fréquences radio	10 V/m plus AM 80% de 80 MHz à 2GHz
Immunité statique	8kV contact, 15kV air
Immunité transitoire	2.4 kV @ 1.2 joules
Temp. en fonctionnement	-10°C ~ +55°C (14°F ~ 131°F)
Dimensions	118mm x 62.5 mm x 41mm (4.65" x 2.46" x 1.61")
Poids	102gr. (3.6oz.)

Utilisez que des charges résistives sur les sorties de relais
 Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

SPECIFICAZIONE DEI CAVI

Usare un conduttore AWG n. 22 (0.5 mm) o di diametro maggiore. Usare la tabella seguente per determinare il diametro del conduttore in base alla lunghezza del collegamento tra il rilevatore e la centrale.

Lunghezza Conduttore	m	200	300	400	800
Diametro Conduttore	mm	0.5	0.75	1.0	1.5
Lunghezza Conduttore	ft.	656	984	1312	2624
Calibro Conduttore	AWG	24	21	18	15

PROVA DI COPERTURA

AVVERTENZA IMPORTANTE: Una volta installato, il rilevatore dovrebbe essere provato a fondo per verificare il corretto funzionamento. L'utente finale dovrebbe essere istruito su come effettuare una prova di copertura settimanalmente.

Assicurarsi che il rilevatore sia impostato con Impulso=1, LED=ON, e che non ci sia nessuno nell'area protetta. Muoversi nell'area che deve essere sorvegliata dal rilevatore e assicurarsi che il LED verde segnali la rilevazione dell'infrarosso, e che il LED giallo segnali la rilevazione della microonda. Se la copertura dovesse essere incompleta, regolare la Portata o cambiare la posizione del rilevatore. Quando la copertura è quella desiderata, i LED di allarme possono essere disabilitati.

Usare gli snodi opzionali per il fissaggio a muro / a soffitto, per risolvere i problemi di posizionamento.

CARATTERISTICHE TECNICHE

Metodo di rilevamento	Sensore Piroelettrico Quad (a quattro elementi) e Doppler a impulsi di microonde
Alimentazione	da 9.6 a 16 Vcc
Assorbimento	In Funzione: 25 mA A Riposo: 20 mA
Compensazione della temperatura	SI
Durata Allarme	2 ± 1 sec
Uscite di Allarme	LC-103-PIMSK - Form A NC LC-123-PIMSK - Form C NC&NO 28Vdc 0.1 A con resistenza di protezione da 10 Ohm in serie
Uscite di Antimascheramento	N.C 28 Vcc 0,1A con resistore di protezione in serie da 10 Ohm - aperto quando il coperchio è rimosso
Deviatore Antisabotaggio	N.C 28 Vcc 0,1A con resistore di protezione in serie da 10 Ohm - aperto quando il coperchio è rimosso
Tempo di Stabilizzazione	1 min
Spie LED	I LED lampeggiano durante la stabilizzazione e l'autodiagnosi
LED rosso	Accesso in slato di allarme
LED verde	Sensore PIR
LED giallo	Sensore Microonda
Immunità RFI	Più di 10 V/m, 80% AM da 80 MHz a 2GHz
Immunità alle Scariche Elettrostatiche	8kV contatto, 15kV in aria
Immunità agli Impulsi	2.4 kV @ 1.2 joules
Temperatura di Funzionamento	Da -10 °C a +55 °C
Dimensioni	118 mm x 62.5 mm x 41 mm
Peso	102 g

Usare esclusivamente carichi resistivi sulle uscite relé

Długość przewodu	m	200	300	400	800
Średnica przewodu	mm	0.5	0.75	1.0	1.5

TEST INSTALACJI

UWAGA: Po zamontowaniu urządzenia należy przeprowadzić test instalacji w celu sprawdzenia poprawności działania czujki. Przed rozpoczęciem testu instalacji należy zworować licznika impulsów ustawić w pozycji 1 i włączyć diodę LED. Następnie należy wywołać ruch w obszarze chronionym obserwując zieloną diodę LED (czujnik PIR) i żółtą diodę LED (mikrofała). Jeżeli zasięg detekcji będzie za mały, należy ponownie wyregulować zasięg lub zmienić miejsce montażu czujki. Po zakończeniu testowania należy wyłączyć diodę LED.

W przypadku montażu czujki w rogu ściany lub na suficie należy użyć opcjonalnego uchwyty montażowego LC-L1ST. Uchwyt montażowy pozwala na ustawienie czujki w pozycji poziomej.

SPECYFIKACJA TECHNICZNA

Metoda detekcji	Czteroelementowy czujnik pasywny podczzerwieni (QUAD PIR) z mikrofalowym impulsowym Dopplerm
Zasilanie	9.6 do 16V=
Pobór prądu	Aktywność: 25mA Czuwanie: 20mA
Kompensacja temperatury	TAK
Czas wzbudzenia alarmu	2 ± 1 sek
Wyjścia alarmowe	LC-103-PIMSK - przełącznik typu A - styk NC LC-123-PIMSK - przełącznik typu C - styki NC i NO 28V=, 0.1A z rezystorem zabezpieczającym 10Ω
Wyjścia antymasking	Normalnie zwarte, 28 V= 0.1 A z rezystorem zabezpieczającym serii 10Ω - rozwarłte po otwarciu obudowy
Przełącznik sabotażowy	Normalnie zwarte, 28 V= 0.1 A z rezystorem zabezpieczającym serii 10Ω - rozwarłte po otwarciu obudowy
Czas nagrzewania	1 min
Wskaźnik LED:	Diody LED migoczą podczas nagrzewania i samostestowania.
Czerwona dioda LED	ŚWIECI SIĘ podczas alarmu
Zielona dioda LED	KANAŁ PASYWNEJ PODCZERWIENI (PIR)
Żółta dioda LED	KANAŁ MIKROFALOWY
Odporność na zakłócenia radiowe	10V/m plus 80% AM od 80 do 2GHz
Odporność na zakłócenia statyczne	8kV kontakt, 15kV
Odporność na zakłócenia przepięciowe	2.4kV @ 1.2J
Temperatura pracy	-10°C ~ +55°C
Wymiary	118mm x 62.5mm x 41mm
Waga	102g

Na zaciskach wyjściowych przełącznika należy stosować wyłącznie obciążenia rezystancyjne

Ograniczona gwarancja

Firma Digital Security Controls gwarantuje, że przez okres 12 miesięcy od daty zakupu produkt użytkowany w normalnych warunkach będzie wolny od wad materiałowych i produkcyjnych. Jeżeli wady takie wystąpią Digital Security Controls dokona według własnego uznania naprawy lub wymiany wadliwego urządzenia po dostarczeniu go do firmowego punktu naprawczego. Niemejsza gwarancja dotyczy wyłącznie wad elementowych i wykonania, nie obejmuje natomiast uszkodzeń powstałych w czasie transportu lub przedudunku lub uszkodzeń powstałych z przyczyn pozostających poza kontrolą Digital Security Controls, takich jak uderzenie pioruna, skok naglejnia, wstrząs mechaniczny, zalanie wodą lub uszkodzeń wynikających z niewłaściwego użytkowania, dokonywania zmian lub nieprawidłowego stosowania urządzenia.
 Powyższe gwarancja udzielana jest wyłącznie pierwotnemu nabywcy i zastępuje wszelkie inne gwarancje, wyraźnie określone bądź dorozumiane oraz wszelkie inne zobowiązania lub odpowiedzialności ze strony Digital Security Controls. Firma Digital Security Controls ani nie przyjmuje odpowiedzialności, ani nie upoważnia żadnych innych osób przedstawiających się jako działające w jej imieniu do modyfikacji lub zmiany warunków gwarancji lub do udzielenia innej gwarancji, bądź przyjmowania odpowiedzialności za ten produkt. W żadnym przypadku firma Digital Security Controls nie będzie odpowiadać za szkody bezpośrednie, pośrednie lub następcze, za utratę spodziewanych zysków, stratę czasu, ani też za żadne inne straty poniesione
