Impassa V1.31

Introduction

DSC is pleased to announce the release of Impassa panels with firmware version 1.31 which adds support for Alarm.com communicator models. This update also includes the ability for connected interactive partners to bypass all zones before arming the system. This update will apply to all Impassa panels currently in production.

As of May 1, 2017, all Impassa panels produced will use this firmware version.

Main Features

Main Features	Customer Benefit
Adds compatibility with Alarm.com integrated communicators	Customers can combine the reliability and ease-of-use of the Impassa security platform with the accessibility and flexibility of Alarm.com’s interactive solution
Integration partners can bypass all zones before arming	The system will alert customers to open zones when they arm from the keypad, but have their application automatically bypass the zones when arming remotely
Alarm.com weather alerts can be seen on Impassa keypad with compatible Alarm.com communicator	Weather updates can be seen at a glance when arming/disarming the system

Compatibility

This firmware version maintains compatibility with all existing Impassa peripherals and communicators.
