

Product Change Note

Universal LTE Alarm Communicators V5.06 Release

Date: February 20, 2020

Product: LTE Universal Alarm Communicators

Region: North America

Brand: DSC

This bulletin is to inform you of the V5.06 firmware release for the LE4000, LE4010, and LE4010CF (US only) Universal LTE Alarm Communicators. The new version includes enhancements designed to improve the supervision and swinger shutdown functionalities.

Feature	Description
Swinger Shutdown – Zone Inputs	Zone input activity will no longer trigger swinger shutdown while the communicator is in Service Mode (case tamper open). The revised functionality will allow unlimited zone activations during system testing/inspection without the need to power cycle the communicator to reset the swinger shutdown counter.
Supervision	Improvements made to internal network recovery algorithms to minimize loss of supervision troubles caused by a momentary loss of cellular connection.

Note:

- Firmware is now available via DLS5 to support local and remote firmware updates.
