**Limited Warranty**

Digital Security Controls Ltd. warrants that for a period of five years from the date of purchase, the product shall be free of defects in materials and workmanship under normal use and that in fulfillment of any breach of such warranty, Digital Security Controls Ltd. shall, at its option, repair or replace the defective equipment upon return of the equipment to its repair depot. This warranty applies only to defects in parts and workmanship and not to damage incurred in shipping or handling, or damage due to causes beyond the control of Digital Security Controls Ltd. such as lightning, excessive voltage, mechanical shock, water damage, or damage arising out of abuse, alteration or improper application of the equipment.

The foregoing warranty shall apply only to the original buyer, and is and shall be in lieu of any and all other warranties, whether expressed or implied and of all other obligations or liabilities on the part of Digital Security Controls Ltd. Digital Security Controls Ltd. neither assumes, nor authorizes any other person purporting to act on its behalf to modify or to change this warranty, nor to assume for it any other warranty or liability concerning this product.

In no event shall Digital Security Controls Ltd. be liable for any direct, indirect or consequential damages, loss of anticipated profits, loss of time or any other losses incurred by the buyer in connection with the purchase, installation or operation or failure of this product.

Motion detectors can only detect motion within the designated areas as shown in their respective installation instructions. They cannot discriminate between intruders and intended occupants. Motion detectors do not provide volumetric area protection. They have multiple beams of detection and motion can only be detected in unobstructed areas covered by these beams. They cannot detect motion which occurs behind walls, ceilings, floor, closed doors, glass partitions, glass doors or windows. Any type of tampering whether intentional or unintentional such as masking, painting, or spraying of any material on the lenses, mirrors, windows or any other part of the detection system will impair its proper operation. Passive infrared motion detectors operate by sensing changes in temperature. However their effectiveness can be reduced when the ambient temperature rises near or above body temperature or if there are intentional or unintentional sources of heat in or near the detection area. Some of these heat sources could be heaters, radiators, stoves, barbeques, fireplaces, sunlight, steam vents, lighting and so on.

Warning: Digital Security Controls Ltd. recommends that the entire system be completely tested on a regular basis. However, despite frequent testing, and due to, but not limited to, criminal tampering or electrical disruption, it is possible for this product to fail to perform as expected. Important Information: Changes or modifications not expressly approved by Digital Security Controls Ltd. could void the user’s authority to operate this equipment.

---

**Specifications**

- **Current Rating**: 75 mA (standby); 3 mA (test mode)
- **Operating Environment**: 0°C-49°C (32°F-120°F); 5%-95% RH, non-condensing
- **Radiated RF immunity**: 10 V/m with 80% AM over range, 80MHz to 1.0GHz
- **Conducted RF immunity**: 10V with 80% AM over range 150kHz to 100MHz
- **Static immunity**: 15 kV
- **Transient immunity**: 2.4 kV @ 1.2 joules
  - **Maximum detection range (diameter)**: 24 ft./7.3 m
  - **Detector placed 8 ft./2.4 m from floor**: 30 ft./9.2 m
  - **Detector placed 12 ft./3.6 m from floor**: 40 ft./12.2 m
  - **Walk detection speed**: 0.5-10/s (0.15-3m/s)
  - **Tamper switch contact rating**: 0.1A @ 24VDC

**Control Panel Compatibility**

- PC4010/4020 v3.x
- PC5010, PC5015 v2.x with PC5100 interface module
Locating the Detector
Select a detector location that will provide the coverage required keeping in mind the following potential problems:

- Do not aim the detector at reflective surfaces such as mirrors or windows as this may distort the coverage pattern or reflect sunlight directly onto the detector.
- Avoid locations that are subject to direct high air flow such as near an air duct outlet.
- Do not locate the detector near sources of moisture (steam or oil).
- Do not aim the detector such that it will receive direct or reflected (mirror) sunlight.
- Do not limit the coverage by large obstructions within the detection area such as plants or filing cabinets.

Device Wiring
To connect the AMB-500, consult the wiring diagram below:

Mounting
To open the case, gently twist the top cover counter-clockwise and lift it up from the bottom cover. Use a small screwdriver to remove the appropriate knockouts for wiring. Mount the bottom cover using the screws supplied.

To close the case, use the locating line on the bottom cover to align the tab on the top cover. Once the top cover is engaged, twist the top cover clockwise to lock it in place.

NOTE: Since no adjustment is necessary for the circuit board, it is not recommended that the installer remove the circuit board from the case.

Device Enrollment
The serial number located on the back of the device must be enrolled into the alarm control panel via Installer’s Programming ([✱] [8] [Installer’s Code]). This procedure is outlined for the PC4010/4020 in the control panel Installation Manual and for the Power panels in the PC5100 Installation Manual.

WARNING: Connect only DSC Addressable Series devices to the addressable loop connections. Connection of ANY other type of device will impair operation. Any devices other than Addressable Series devices which require power to operate must be powered separately.

Walk Testing
Once the detector has been set up, walk test the entire area where coverage is desired. Should the coverage be incomplete, readjust or relocate the detector to obtain full coverage.

IMPORTANT NOTE: Upon installation, the unit should be thoroughly tested to verify proper operation. The end user should be instructed on how to perform walk tests, and should walk test the detector weekly.

Changing the sensitivity
AMB 500 features Fast and Slow detection modes, which are set on jumper J1. Jumper J1 is set at the factory for the Fast detection mode. In a normal operating environment, this setting provides the best detection.

In certain environments where rapid air movement, heaters and other variables present problems, use Slow detection mode to stabilize the detection.

To change the setting from Fast to Slow, take the jumper off the header.
