TM2 Telecom Interface Module
Installation Instructions

The TM2 will connect the telecom network to the panel's telecom circuit, through an Escort5580 or PC5928 module, with a FCC-68-regulation plug.
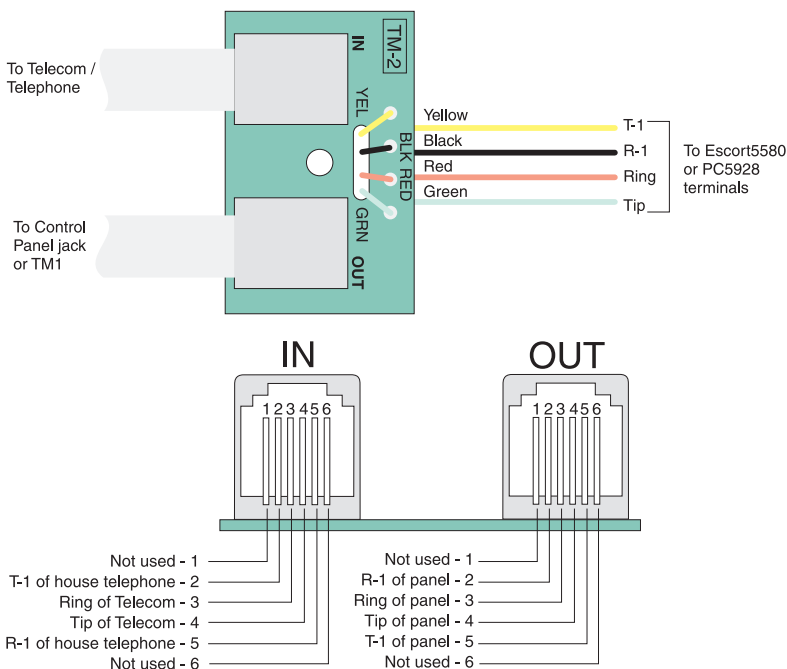

Installation
Attach the TM2 to the inside or bottom of the panel's cabinet with the provided double-sided tape.

OR

Drill a 3/16″ hole in the cabinet and attach the TM2 using a 1/4″ plastic standoff.

Wiring
Connect the TM2 as shown below:

IF a TM1 module is connected to the control panel, use a "straight through" patch cord between the TM2 "out" jack and the TM1. Please see the TM1 instruction sheet for a description of TM1 wiring.
