- Full 3-second delay on panic alarm to reduce false alarms
- Multifunction belt clip included
- Reliable 868 MHz technology
- Optional generic rubber insert included
- Water resistant
- RoHS compliant
- CE listed
Committed To False Alarm Reduction

False alarm reduction is achieved through activation delays that require users to press and hold a button for a period of time before its function is initiated. For example, to trigger the arm/disarm function you must press and hold the appropriate button for one second, and for the panic alert, three seconds.

A red LED indicator on the WS8939W flashes to indicate that a transmission has been sent to the security system. The LED indicator activates only after the necessary delays have expired.

Control

The WS8939W can be used to arm/disarm security systems from a distance, be programmed to trigger garage door openers, turn on lights, open powered gates or trigger panic alarms.

Optional generic rubber insert included.

Versatile

A multi-function clip allows the wireless key to be clipped to a convenient location, whether it's on a belt or car visor. The WS8939W is built with reliable 868 MHz technology, uses long-life lithium batteries and is compatible with the RF5132-868W wireless receiver.

For those not using the default settings, the three-second delay on the panic alert can be removed. A generic rubber button insert without the standard icons is included and can easily be inserted.

Compatibility

The WS8939W is compatible with the following receiver:

PowerSeries™ Wireless Receiver RF5132-868W

Specifications

- Dimensions: 57 mm x 32 mm x 13 mm
  
  (2 1/4" x 1 1/4" x 7/16")
