**ULC Installation Guide**

**All Installations:**
During any ULC Installation described within this Guide, all the rules for safe installation specified in the CEC (Canadian Electrical Code) shall be respected. This guide is intended to be used in conjunction with the following DSC alarm control panel models unless otherwise stated: MAXSYS (PC4020)*, PowerSeries (PC1864/PC1832/PC1616)*, PowerSeries Neo (HS2128/HS2064/HS2032/HS2016). Always use this guide in conjunction with the installation manual of mentioned alarm control panel.

- For mounting on the exterior of vault, safe, or stockroom, installation of vibration detector is required.
- Transformer: Plug-in type or hardwired, minimum rated 16.5VAC, 37-40VA Class 2 Power limited, CSA/cETL/cUL Listed. Refer to product installation manual.

**Notes:**
- Do not mount the hardwired transformer inside the DSC enclosure models PC5003C, PC4050C.
- Install with ULC Listed devices where applicable.

---

</tbody>
</table>

**Notes:**
- The telephone service should be of a type that provides for timed release disconnect, in order to give the digital alarm communicator transmitter (dialer) the ability to disconnect an incoming call to the protected premises.
- If the lines (numbers) are in a single hunt group, they shall be individually accessible; otherwise, separate hunt groups shall be required. These lines shall be used for no other purpose than receiving signals from a digital alarm communicator transmitter. These lines (numbers) shall be unlisted. A timed release disconnect requirement applies to the telephone lines (numbers) connected to the digital alarm communicator receiver. The numbers assigned to the digital alarm communicator receiver shall be individually accessible, even when they are connected in rotary (hunt group).
- Models SG-MLR2-DG and SG-MLR2000 Receivers (DARC type) are legacy products that are still used by some ULC Listed Signal Receiving Centres.
**Notes:** For equipment used at the protected premises or SRC and intended to facilitate IP communications (hubs, routers, NID, DSL/Cable modems) 24h back-up power is required. Where such cannot be facilitated, a secondary (back-up) communication channel is required.

**Notes for using Private, Corporate and High Speed Data Networks:** Network access and domain access policies shall be set to restrict unauthorized network access, and “spoofing” or “denial of service” attacks. Select the internet service providers that have redundant server systems, back-up power, routers with firewalls enabled and methods to identify and protect against “denial of service” attacks (i.e., via “spoofing”).

**Notes for using Public Switched and Wireless Data Networks:** Communication channels shall be facilitated such that the communicator will restrict unauthorized access, which could otherwise compromise security.

**Fire Monitoring Communication Systems** (Refer to the wiring diagrams in this guide for possible configurations)

Fire alarms shall be received at SRC in 60 seconds. Trouble signals shall be received at SRC in 90 seconds. AES/128bit encryption for active and passive IP connections.

**Notes:** Models 5G-MRLR-DG, 5G-MRLR2000 are not ULC Listed under the ULC-5559-04 requirements. Dual dialer is not for use with PowerSeries Neo panels. *Models PC4020, PC4701, PC1864, PC1832, PC1616, PC5700, TL260, TL260G5, TL260G3, TL260G3(R), TL280(R), TL280G3(R), GS2060, 3G2060, 3G2080(R) are not listed under the ULC-5559-13 requirements as of effective date of the standard. Only products manufactured before December 16, 2016 can be used in new ULC certified installations. After this date these products can be used only as replacement parts in existing installations and the marking will indicate: “For Replacement Only – Complies with ULC-5559-04”.

**Note:** For equipment used at the protected premises or SRC and intended to facilitate the IP communications (hubs, routers, NID, DSL/Cable modems) 24h back-up power is required. Where such cannot be facilitated, a secondary (back-up) communication channel is required.

**Note 2:** Each ULC labelled “Subscribers’ Unit Fire and/or Burglary” communication system shall be connected to a ULC labelled “Fire Alarm Control Unit” if they are to monitor a complete fire alarm system. As minimum, system fire alarms, supervisory and troubles signals shall be transmitted to the SRC.

**Note 3:** Program input zones as Fire Type for connection of ULC labelled 4-wire smoke detectors (e.g., DSC FSA-410A series) or program PGM 2 for connection of compatible ULC labelled 2-wire smoke detectors (e.g., DSC FSA-210A series). Refer to Zone Wiring Diagrams in this guide.

**Note 4:** Double end-of-line zone configuration must be used for Medium, High and Very High Risk Installations (refer to Zone Wiring Diagrams in this guide for possible configurations).

**Note 5:** Only one contact per zone (refer to Zone Wiring Diagrams for double door/window contact in this guide).

**Note 6:** For financial/bank applications when mounting the control panel on the exterior of a vault, safe, or stockroom, installation of vibration detector is required. Recommended assault sensor UTC, model 5422.

**Note 7:** This may be connected to ULC labelled Sprinkler Riser devices (refer to Zone Wiring Diagrams in this guide).

**Note 8:** All system enclosures must be 24-hour tamper protected against opening or removal (DSC Tamper Kit T-1 or equivalent). This includes control unit and accessory cabinets, transmitters, initiating devices and bells/strobes. Keypads must be tampered if they use a zone input or if they are installed outside the protected area.

**Note 9:** When performing the test for loss of communications channel on a GS3055-I, GS3060, 3G4010, 3G4010CF, TL260G3(R), 3G2060(R), TL2803G(R), 3G2080(R), TL2803G(RE) or 3G2080(RE), it is recommended that you remove the SIM card from the communicator to simulate loss of communications. Removing the antennae is not an acceptable method for testing on these models as the 3G radio used in this product may be able to communicate without the antennae connected. In this case, please use the ACSM check.

**Note 10:** When performing the test for loss of communications channel on a 3G3070, it is recommended that you remove the antenna from the communicator to simulate loss of communications. Please note that the ‘Cellular Service’ attribute must also be enabled via C24 Communications.

**Programming**

The notes in the installation and programming sections describing the system configurations for ULC Listed installations must be implemented.

**Protection of the Control Unit - Burglary**

The local control unit and local power supply must be protected in one of the following ways:

- The control unit and power supply must be located within the area of greatest protection on a tamper protected circuit.
• Each partition shall arm the area protecting the control unit and the audible alarm device power supply. This may require duplicate protection armed by each partition. Access to this protected area, without causing an alarm, will require that all partitions are disarmed.

**User Information**
The installer should advise the users and note the following in the user instruction manual:
- Service organization name and telephone number
- The programmed exit time
- The programmed entry time
- Safety precautions specified for the connected equipment

Products or components of products, which perform communications functions only, shall comply with the requirements applicable to communications equipment as specified in CAN/CSA-C22.2 No. 60950-1, Information Technology Equipment-Safety - Part 1: General Requirements.

In all cases described above, the protected area for the control unit must be programmed so that it cannot be bypassed, and installed in accordance with CAN/ULC-S302 or CAN/ULC-S310.
Zone Wiring Diagrams

4-Wire Smoke Detectors

Smoke Detector must be latching type (such as DSC MN240 Series). To reset smoke detectors, enter [0] [7] [2].

2-Wire Smoke Detectors

NOTE: Reference to WF terminal block designation is only specific to certain DSC modules (MAXSYS system), the PowerSeries and PowerSeries Neo control panels can use any zone programmed as type 24-Hr Sprinkler when used in conjunction with a sprinkler supervision system.

Water Flow Connection

24h ZONE

• 5 maximum in parallel, in one zone
• must be in close proximity to each other in one zone

ULC Standpipe Monitoring

NOTE: Reference to WF terminal block designation is only specific to certain DSC modules (MAXSYS system), the PowerSeries and PowerSeries Neo control panels can use any zone programmed as type 24-Hr Sprinkler when used in conjunction with a sprinkler supervision system.
Double End-of-line Zone Configuration

**Intrusion Detector (with tamper)**
**ULC Commercial Zone**
For One Form A Contact

Double End-of-line Zone Configuration

**ULC Safe and Vault Installation**
For Heat and Seismic Detector

**NOTE:** The tamper and relay contacts (NC) used in door/window detectors or motion detectors are shown as the product is powered-up and in normal supervisory condition.

Double End-of-line Zone Configuration

**Intrusion Detector**
**ULC Commercial Zone**
For One Form C Contact
Fire Monitoring Communication Systems Wiring Diagrams

Notes:
- These wiring diagrams are also representative for Commercial Burglary Monitoring applications.
- Either RM1C ULC OR RM2 relays can be used for ULC installations.
- Recommended DSC power supply models: PC5204/PC5200/PC4204CX/HSM2204/HSM2300.
- Refer to power supply installation manual for compatible control panels.

1. DSC Subscribers’ Unit Fire and Dual Dialer (Passive Communication System)

2. DSC Subscribers’ Unit Fire and IP Transmitter (Active Communication System)

Notes:
- All wiring connections shall be run in a mechanically protective conduit.
- T-Link TL250 Supervision at Signal Receiving Centre (SRC) shall be enabled (180 Sec.)
- Dry contact outputs from ULC Listed Fire Alarm Control Unit shall be connected to Zone inputs on the ULC Listed DSC Subscribers’ Unit Fire.
3. DSC Subscribers’ Unit Fire and IP Transmitter (Passive Communication System)

- All wiring connections shall be run in a mechanically protective conduit.
- Phone 1 program for T-Link ([301] set as DCAA).
- Phone 3 program in [303] and set as back-up to Phone 1 ([380] option 5 ON, 6 OFF).
- Phone 2 program in [302] the same as Phone 3.
- T-Link supervision enabled (Section [851], option [023] set to 01). (Section [851], option [023] set to 01).
- Phone Line Monitoring (TLM) shall be enabled.
- PGM1 programmed as System Trouble (Section [009] Program as type 09; Section [501] TLM option 3 ON).
- T-Link TL250 Zone 1 program as type 21 in Section [036] and use reporting code 99 in section [050].
- 24h Test Transmission over phone line 1 and 2 must be enabled (Section [376] set options 1 and 2 ON).
- Fire Alarms shall be sent over both channels (section [351] set options 1 and 2 to ON).
- Dry contact outputs from ULC Listed Fire Alarm Control Unit shall be connected to Zone inputs on the ULC Listed DSC Subscribers’ Unit Fire.

4. Fire Alarm Control Unit (with no dialer) and IP Transmitter (Active Communication System)

- Power for T-Link TL250 shall be provided from Fire Alarm Control Unit or separately listed Power Supply rated for the application (12V/275mA).
- All wiring connections shall be run in a mechanically protective conduit.
- T-Link TL250 Supervision at Signal Receiving Centre (SRC) shall be enabled (180 Sec.).
- For local supervision of the IP communicator connect PGM output from T-Link TL250 to one zone input on the Fire Alarm Control Unit.
- Dry contact outputs from ULC Listed Fire Alarm Control Unit shall be connected to Zone inputs on the T-Link TL250 (or PC5108 if used).
5. Fire Alarm Control Unit (with dialer) and IP Transmitter (Active Communication System)

- Power for T-Link TL300 shall be provided from Fire Alarm Control Unit or separately listed Power Supply rated for the application (12V/275mA).
- All wiring connections shall be run in a mechanically protective conduit.
- T-Link TL250 Supervision at Signal Receiving Centre (SRC) shall be enabled (180 Sec.).
- For local supervision of the IP communicator connect PGM output from T-Link TL300 to one zone input on the Fire Alarm Control Unit.
- Dry contact Trouble output from ULC Listed Fire Alarm Control Unit shall be connected to Zone input on the T-Link TL300 for supervision of Tip/Ring connection.

Note: Model T-Link TL300CF has its own power supply (with integral backup) and only requires connection to a dedicated AC mains circuit.

6. Fire Alarm Control Unit (with dialer) and GSM/HSPA Transmitter (Passive Communication System)

- Power for GS3055-I/GS3060/3G3070/3G4010 shall be provided from Fire Alarm Control Unit or separately listed Power Supply rated for the application (12V/700mA).
- (Jumper JP3 shall be ON for Fire Monitoring)
- (JP3 setting is not required for 3G4010)
- All wiring connections shall be run in a mechanically protective conduit.
- For local supervision of the GSM/HSPA transmitter connect PGM output from GS3055-I/GS3060/3G3070/3G4010 to one zone input on the Fire Alarm Control Unit.
- Dry contact Trouble output from ULC Listed Fire Alarm Control Unit shall be connected to Zone input on the GS3055-I/GS3060/3G3070/3G4010 for supervision of control units Tip/Ring connection.
- Fire Alarms shall be sent over both communication channels. Fire output from Fire Alarm Control Unit shall be connected to an Input on the GS3055-I/GS3060/3G3070/3G4010 that is programmed as fire.
- 24h Test Transmission must be enabled on the dialer and on the GS3055-I/GS3060/3G3070/3G4010.

*Model 3G4010CF has its own power supply (with integral backup) and only requires connection to a dedicated AC mains circuit.
**7A. DSC Subscribers' Unit Fire and GSM/HSPA Transmitter (Passive Communication System)**

  - GS3055-I
  - GS3060
  - 3G3070
  - 3G4010
  - 3G4010CF
  - T1/R1

- **Notes:**
  - Connect PGM output from GS3060/3G3070/3G4010 (Phone Line Trouble) to a zone input on the subscriber unit for supervision of the PSTN phone line voltage.
  - When the GS3060/3G3070/3G4010 is installed remotely from the DSC Control Panel, it is required to monitor the Phone Line Trouble condition at the keypad by using an additional RM1C Relay.
  - All wiring connections shall be run in a mechanically protective conduit.
  - Refer to notes in Figure 7A and detailed diagrams in Figure 9 for additional information.

*Model 3G4010CF has its own power supply (with integral backup) and only requires connection to a dedicated AC mains circuit.*

    - PC4020
    - HS2128
    - PC1864
    - HS2064
    - PC1932
    - HS3022
    - PC1616
    - HS2016

- **GSM/HSPA Transmitter**
  - GS3055-I
  - GS3060
  - 3G3070
  - 3G4010
  - 3G4010CF
  - T1/R1

- **Notes:**
  - Power for GS3055-I/GS3060/3G3070/3G4010 shall be provided from Fire Alarm Control Unit or separately listed Power Supply rated for the application (12V/700mA) (Jumper JP3 shall be ON for Fire Monitoring).
  - JP3 setting is not required for 3G4010.
  - All wiring connections shall be run in a metallic protective conduit, within 18m same room.
  - Phone Line Monitoring (TLM) shall be enabled.
  - Connect PGM output from GS3055-I/GS3060/3G3070/3G4010 (Trouble conditions) to a zone input on the Subscriber Unit for supervision of the GSM Transmitter.
  - 24h Test Transmission over phone line (PSTN) and GS3055-I/GS3060/3G3070/3G4010 must be enabled.
  - Phone Alarms shall be sent over both communication channels.
  - On the Subscribers' Unit program PGM1 for PC1864/PC1832/PC1616 as System Event (Section [009] as type 10; Section [501] Fire Event option 2 ON). An alternate option is to program PGM1 as Zone Follower (Sec [009] = 29) and assign Fire Zone to PGM1 in Section [551]. Ensure Bit 3 is on in [501]. In this case, a restored fire alarm condition does not require the DSC control panel to be reset. For PC4020 program PGM1 as type [49] Steady Fire (00070049).
  - Dry contact outputs from ULC Listed Fire Alarm Control Unit shall be connected to Zone inputs on the ULC Listed DSC Subscribers' Unit Fire.
  - For ULC-S561 installations when using the PC5003C enclosure it is required to install the listed hardwired transformer outside the enclosure.
  - The control panel manual shall be consulted for the list of compatible keypads.
  - Refer to detailed diagrams in Figure 8.

*Model 3G4010CF has its own power supply (with integral backup) and only requires connection to a dedicated AC mains circuit.*
8. Connection Details for GSM/HSPA Supervision Relay and Redundant Fire Alarm Transmission

Connection Details for GSM/HSPA Supervision Relay & Redundant Fire Alarm Transmission

Connection Details for GSM/HSPA Supervision Relay & Redundant Fire Alarm Transmission

NOTE: Use EOL resistor in series with N.O. contacts of the relay connected to PGM4
Connection Details for GSM/HSPA Supervision Relay, Phone Line Supervision Relay and Redundant Fire Alarm Transmission

NOTE: Use EOL resistor in series with N.O. contacts of the relay connected to PGM4

Connection Details for GSM/HSPA Supervision Relay, Phone Line Supervision Relay and Redundant Fire Alarm Transmission

NOTE: Use EOL resistor in parallel with N.C. contacts of the relay connected to PGM4
**Notes:**
- Power for TL260/TL260GS/GS2060/TL2603G/3G2060/3G2060R/TL260/TL260R shall be provided from PC1864/PC1832/PC1616 Subscriber's unit (Bell+ and AUX-).
- Use for communication SIA format, program Section [350]= 04, Section [165] = 001 and Section [167]=060.
- TL260/TL260GS/GS2060/TL2603G/3G2060/3G2060R/TL260/TL260R can be used as a passive communication module (back-up mode for Dialer) or as an active communication module (IP, GSM or both).
- For passive configurations:
  - Phone line monitoring (TLM) shall be enabled on the panel (section [015] bit 7 ON).
  - Program the analog phone number in Section [301] (primary path).
  - Program “DCAA” in Section [302] (redundant path for Fire Alarms) and program Section [351] bit 1 and 2 ON.
  - Program “DCAA” in Section [303] (back-up path).
  - Program the call directions for tamper [359], opening/closing [367], maintenance [375] and test transmissions [376] as required by the application (bit 1 and 5 ON).
- For active configurations:
  - Phone line use is optional (depends on the IP or GSM channel being used and back-up power provisions for the IP channel). TLM does not need to be programmed if the phone line is not used.
  - Program “DCAA” in location [301] (IP/GSM module primary path). Select in section [851][005] whether the IP or GSM will be the primary or secondary path.
  - Program heartbeat interval in Section [851][004]=005A (90s). The supervision window at the Signal Receiving Centre’s receiver shall be programmed as max. 180s.

**Network Connection**
Use only CAT5 cable
(300ft/100m max.) Supervised

**Input Ratings (from Bell Out)**
11.1V - 12.6 VDC
100mA standby
400mA Alarm

**DSC Panel minimum power requirements**
16 VAC 40 VA transformer
12 VDC 7Ah battery
COM

3G2080E, 3G2080RE that are using a different integrated radio module.

Note:
The above reference to models TL280, L280R, TL2803G, TL2803GR, 3G2080, 3G2080R also covers the models TL280E, TL280RE, TL2803GE, TL2803GRE, 3G2080E, 3G2080RE that are using a different integrated radio module.

11. TL280/TL280R/TL2803G/TL2803GR/3G2080/3G2080R Wiring diagram Active/Passive Communication System

**Notes:**
- Connect PC-link cable between TL280/TL280R/TL2803G/TL2803GR/3G2080/3G2080R and HS2128/2064/2032/2016 as instructed and enable the alternate communicator (section [382] bit 5 ON).
- For communication format, program section [350] [001-004] (03 for Contact ID, 04 for SIA).
- TL280/TL280R/TL2803G/TL2803GR/3G2080/3G2080R can be used as either a passive or active communication module (Ethernet/Cellular or both)
- For passive configurations (Commercial Burg Line Security Level P2, Backup transmission configuration):
  - Phone line monitoring (TLM) shall be enabled on the panel (section [015] bit 7 ON).
  - Set communicator path on the panel: section [300] [001] set to Phone line, [002] set to Alt Comm Rec 1 (Ethernet channel) or Alt Comm Rec 3 (Cellular channel). Note that any communicator path can be selected as primary (location [001]) or backup (location [002]) in this configuration. Enable Cellular Low Signal Trouble in section [851][005] bit 8 ON.
  - Program the analog phone number in Section [301][001] (primary path).
  - Program the partition call directions in Section [311] (enable both receivers in subsection [001] for alarms, [002] for tamper, [003] for opening/closing) as required by the application.
  - Program system call directions in Section [309] (enable both receivers in subsection [001] for maintenance, [002] for test transmission) as required by the application.
  - Select backup option in Section [384] will select path to backup primary path.
  - Complete programming of the TL280/TL280R/TL2803G/TL2803GR/3G2080/3G2080R module in section [851] (Ethernet/Cellular address, supervision options, Ethernet/Cellular test transmission time and cycle).
- For passive configurations (Fire Monitoring or Commercial Burg line Security Level P3, simultaneous transmission configuration):
  - Phone line monitoring (TLM) shall be enabled on the panel (section [015] bit 7 ON).
  - Set communicator paths on the panel: section [300][001] set to Phone line, [002] set to Alt Comm Auto. Enable Cellular Low Signal Trouble in section [851][005] bit 8 ON. Note that any communicator path can be selected as primary (location [001]), secondary (location [002]) or third (location [003]) in this configuration, since all paths transmit the selected events (see sections [309] and [311]) parallel communication.
  - Program the analog phone number in Section [301][001].
  - Program the partition call directions in Section [311] (enable all three receivers in subsection [001] for alarms, [002] for tamper, [003] for opening/closing) as required by the application.
  - Program system call directions in Section [309] (enable all three receivers in subsection [001] for maintenance, [002] for test transmission) as required by the application.
  - Enable parallel transmission in Section [380] bit 5 ON. Important Note: Enabling this option ensures the selected events are transmitted in parallel on all enabled communication paths.
  - Complete programming of the TL280/TL280R/TL2803G/TL2803GR/3G2080/3G2080R module in section [851] (Ethernet/Cellular address, supervision options, Ethernet/Cellular test transmission time and cycle).
  - For 24hr test transmission, [851] system test options [026-029] shall be enabled [FF] for the communication paths available. [851][124-125] and [224-225] shall be programmed with time of day for test transmission and 1440 minutes (24h) for test transmission cycle.
  - For active configurations (Fire Monitoring, Commercial Burglary Security Level Level A1-A4):
    - Phone line use is optional (depends on the Ethernet or Cellular channel being used and back-up power provisions for the Ethernet channel). TLM does not need to be programmed if the phone line is not used. Enable Cellular Low Signal Trouble in section [851][005] bit 8 ON.
    - Set communication path: in Section [300][001] select 01 for Alt Comm Rec 1 (Ethernet channel), or 02 for Alt Comm Rec 3 (Cellular channel).
    - Complete programming of the TL280/TL280R/TL2803G/TL2803GR/3G2080/3G2080R module in section [851] (Ethernet/Cellular address, supervision options, Ethernet/Cellular test transmission time and cycle).
    - Program heartbeat interval in Section [851][004] 005A (90s). The supervision window at the Signal Receiving Centre’s receiver shall be programmed as max. 180s. Note: select the proper supervision profile from C24 website when enrolling/registering the Cellular alarm communicator for first time.

**Note:** The above reference to models TL280, L280R, TL2803G, TL2803GR, 3G2080, 3G2080R also covers the models TL280E, TL280RE, TL2803GE, TL2803GRE, 3G2080E, 3G2080RE that are using a different integrated radio module.
For UL Commercial Burglary installations, the 3G8080(I) is listed as the sole means of communication (supervision window of 200s required at monitoring station) or as a back-up when used in conjunction with a POTS line (dialer). The communicator shall be powered from the compatible listed control unit HS2128/HS2064/HS2032/HS2016 or compatible listed power supply HSM2204/HSM2300 that complies with the ratings specified in the communicators manual.

For ULC Commercial Burglary installations the 3G8080(I) is listed as an active communication system with line security level A1-A4 and as a passive communication system with communication line security level P1 when used alone or as P2-P3 when used in conjunction with the integrated POTS line (dialer) in the compatible NEO Alarm Control panels HS2128, HS2064, HS2032, HS2016.
