GS3055-I and GS3060 Power Up Procedure

We would like to remind you of the correct power up procedure for DSC's GS3055-I or GS3060 communicators.

We strongly recommend that a backup battery be used in conjunction with the primary power source for the unit. In addition, all wiring connections are to be completed prior to applying power to the system. This will ensure that the unit goes through its required initialization routine without interruption of power.

If this procedure is not followed during the initialization routine and power is interrupted within a 200ms window, a specific file could become corrupted and may render the unit inoperable. If this occurs, the red LED on the unit will flash two times indicating a trouble and the unit will not display signal strength (no LED's lit).

In this situation there is no method for the unit to recover in the field, and it will need to be returned and reconfigured by DSC.

To avoid this potential inconvenience, please ensure you follow the recommended power up procedure.

If you have any additional questions please contact DSC Technical Support at 800 387 3630 or 905 760 3000, or via e-mail at tech@dsc.com.

To order, call 1-888-888-7838
