

PC5950 Audio Verification Module

User Guide

When installed on your alarm system, the PC5950 Audio Verification Module enables you to listen and talk through your alarm panel from any touch-tone phone.

Set-up

The PC5950 must be set up by your installer to use one of the following access methods:

- **Number of Rings:** The PC5950 answers an incoming call after a programmed number of rings.
- **Double call (Answering Machine override):** The PC5950 answers only after receiving two calls within a programmed time. Use this method if you have an answering machine or a fax on your telephone line.

Calling In

1. Call the PC5950 from an external phone.
2. If you are using the double call method, let the phone ring several times, hang up and then call again.
3. When the PC5950 answers, you will hear beeps to indicate initial access.
4. Enter your four-digit user code (default: 1234). After the valid code is accepted, you will hear a distinctive set of tones that lets you know your session is active.
5. Upon session start, the PC5950 automatically enters listen only mode. The session lasts 2 minutes but may be extended by the user. See the chart below for all the options available to you through your touch-tone phone.

Touch-Tone Key	Function
2	Talk and Listen (VOX)
3	Listen Only
7	Extend Time (2 minutes)
99	Disconnect

6. Press an option key at any time during the session to perform the function.

Changing PC5950 User Code

Once you establish an active session on the PC5950, you can access programming mode and change your user code.

1. Enter [*] [5]. You will hear three low beeps, indicating that you have entered the programming section.
2. Enter your new code. Two low beeps are given to acknowledge data entry.
3. Enter the new code again to confirm it is valid. If the two codes are the same, the new code is saved automatically and you will hear three low beeps. The PC5950 automatically returns to the previous mode.
4. If the two codes entered are not the same, the code is not changed and an error tone is given. The PC5950 will wait for 10 seconds for the code to be re-entered. If no further entry is made within that time, the PC5950 automatically returns to the previous mode.
