

Introducing the GS2060 GSM/GPRS Wireless Alarm Communicator

Back up Alarm Communication of Phone Line for Residential or Commercial Environments

ISC WEST -- Las Vegas, Nevada, Wednesday, April 1, 2009 – DSC is pleased to announce the GS2060 GSM/GPRS Wireless Alarm Communicator.

As more and more homes or businesses move away from traditional phone lines, towards Voice over IP or mobile phones, alternate delivery methods for alarm communication must be explored for security systems. The GS2060 GSM/ GPRS Wireless Alarm Communicator provides a **FLEXIBLE** solution for both residential and commercial environments. When connected to a DSC Power Series PC1864/1832/1616 control panel, alarm reporting paths can be combined through the Public Switched Telephone Network (PSTN) if so desired, plus the GSM/GPRS channels. It conveniently utilizes the GPRS data channel of the GSM network as back-up to ensure high speed, **RELIABLE** and secure alarm communications. With the GSM/GPRS backup feature, any concerns about the possibility of phone line disruption is removed.

Through the GPRS channel of the GSM network, the GS2060 offers full data reporting and remote management for installers, saving time and reducing costs. With the use of DSC's DLS IV downloading software, you can remotely program and configure the control panel, change user information, retrieve historical records, generate the status reports and maintenance details from a PC via the GPRS data channel.

With 128-bits AES encryption of the alarm signal on the GPRS data channel, central stations, installers and customers can be assured that this is the most secure alarm communicator offered. And with programmable (by seconds) supervision heartbeats, the communicator's availability is fully monitored. The option of GSM/GPRS back-up or primary alarm communication provides a complete, supervised link to the premises and the added benefit of opening increased revenue streams for dealers.

The GS2060 connects to the PC-Link connector on the PC1864/1832/1616 control panel within the same enclosure, providing the GSM/GPRS connection that sends predefined SIA format codes to a central monitoring station. For the retrofit installation, simply install this communicator to an already existing control panel and the service is instantly **UPGRADED** to a dual-path alarm communicator. GS2060 can be programmed remotely by CONNECT 24. Activating and initializing the GS2060 is done using the automated telephone activation system or visiting the new web-user interface provided by CONNECT 24.

Customized cost-effective rate plans have been negotiated and are available through CONNECT 24 directly or authorized master resellers. Visit www.connect24.com for more information.

DSC designs and manufactures exceptional products that work when it matters most.
